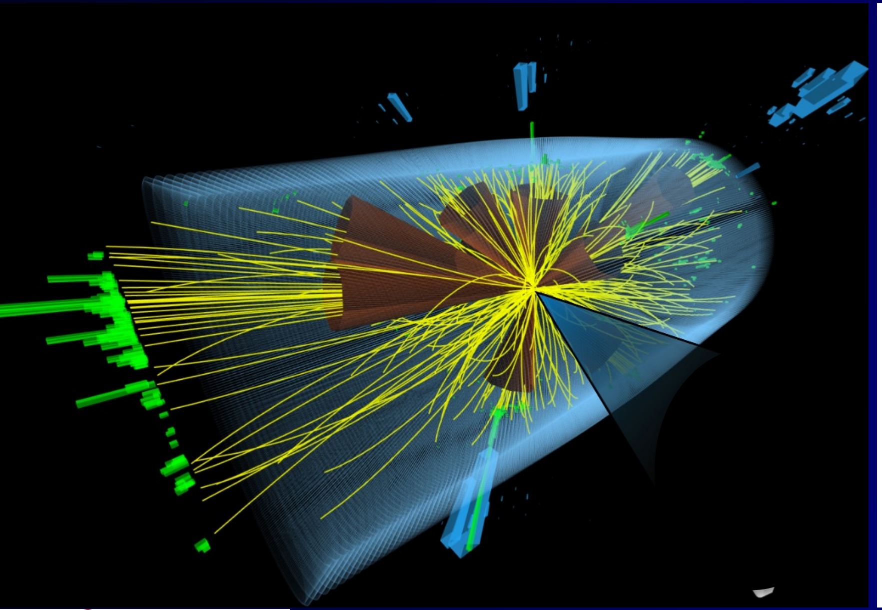
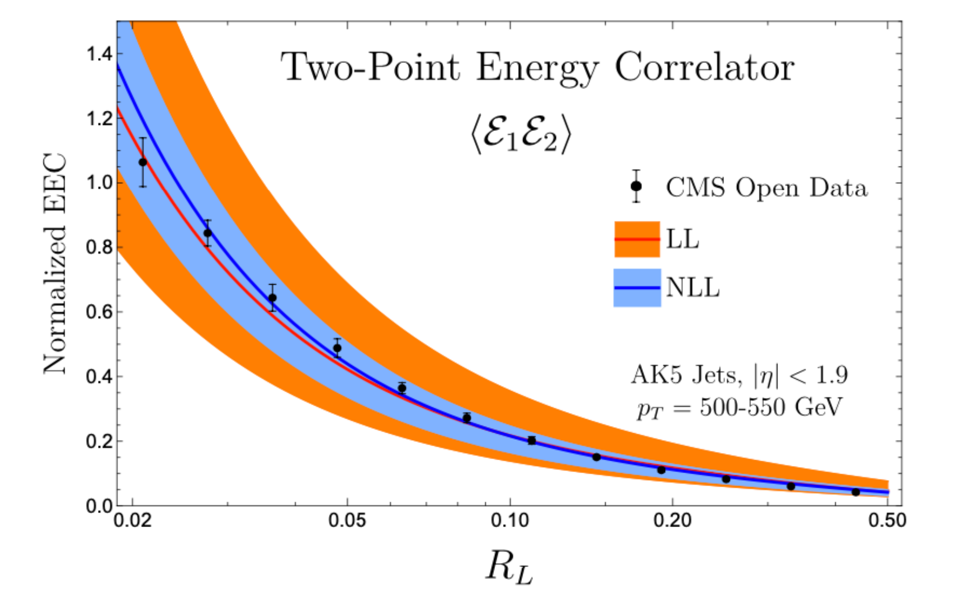
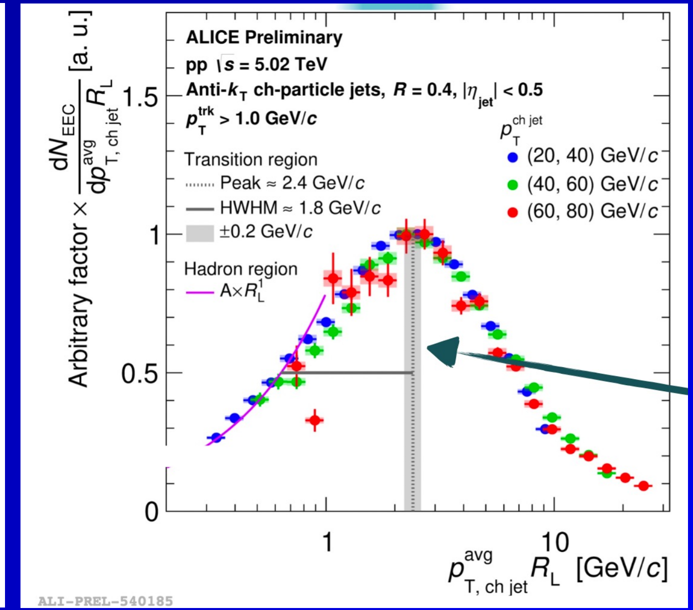
Energy-energy correlator (EEC)

A new jet substructure observable:

$$\frac{d\Sigma^{(n)}}{d\theta} = \frac{1}{\sigma}\sum_{i\neq j}\int d\vec{n}_{i,j}\,\frac{d\sigma_{ij}}{d\vec{n}_{i,j}}\,\frac{E_i^n E_j^n}{Q^{2n}}\,\delta(\vec{n}_1\cdot\vec{n}_2-\cos\theta)$$







Moult, et al

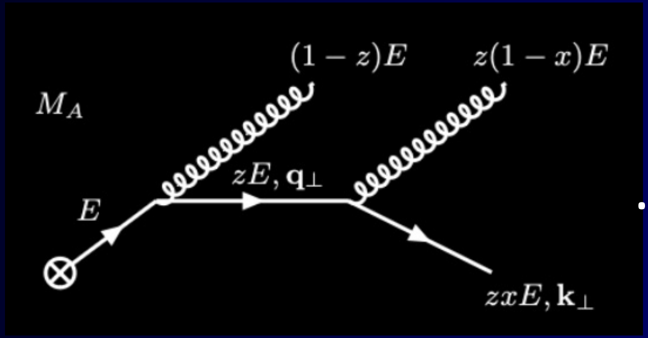
Fan, QM23

Jet EEC in Vacuum

LO emission in vacuum:

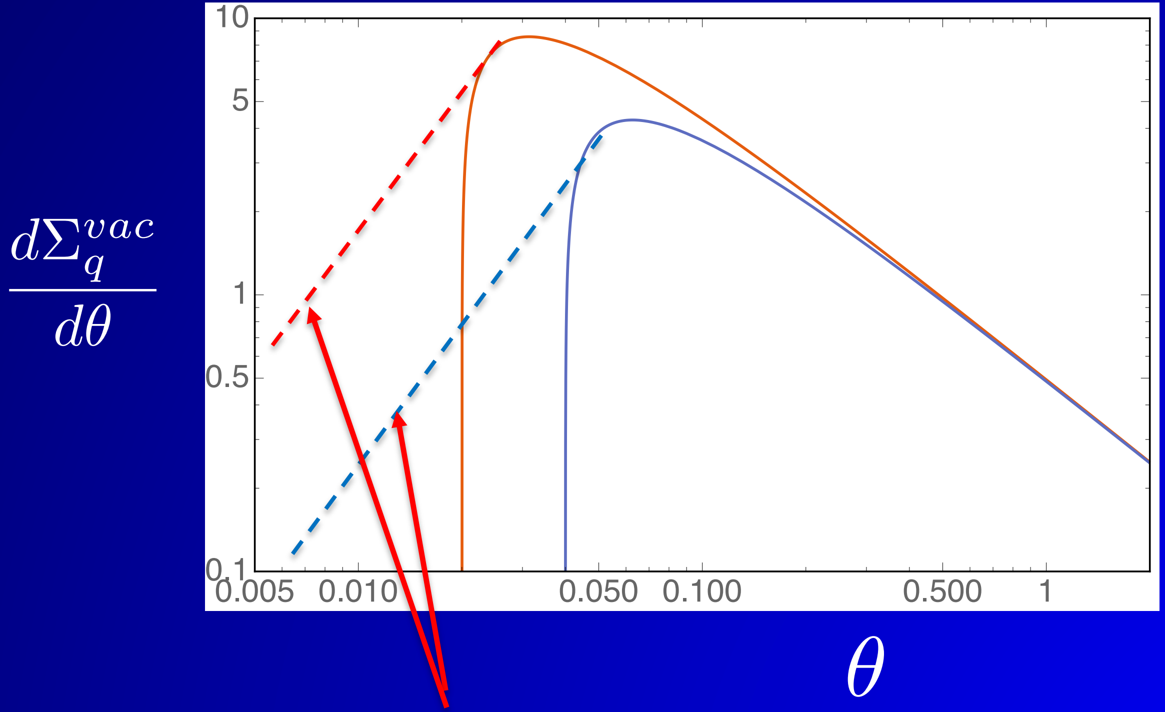
$$\frac{d\Sigma_q^{\rm vac}}{d\theta} \approx \frac{\alpha_s}{2\pi} C_F \int_0^1 dz\ z(1-z)P_{qg}(z) \int_{\mu_0^2}^{Q^2} \frac{d\ell_\perp^2}{\ell_\perp^2}\delta\left(\theta - \frac{\ell_\perp}{z(1-z)E}\right) \approx \frac{\alpha_s}{2\pi}\frac{C_F}{2\theta}\left(3 - \frac{2\mu_0}{E\theta}\right)\sqrt{1-\frac{4\mu_0}{E\theta}}$$

Leading Log evolution:



....

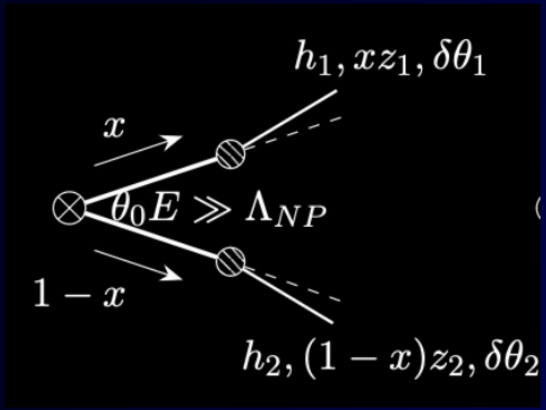
$$\frac{\partial \Sigma_q}{\partial \ln \mu^2} = \frac{\alpha_s(\mu^2)}{2\pi}\left[\gamma_{qq}(3)\Sigma_q + \cdots\right]$$

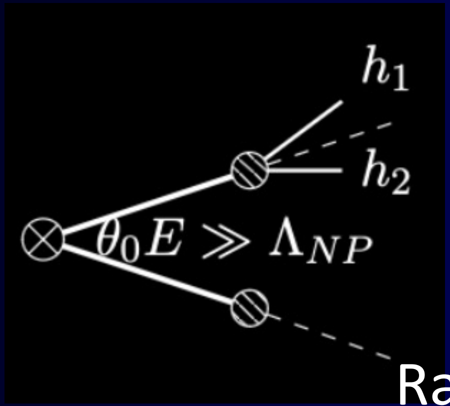


Non-leading log power corrections $\sim \theta$

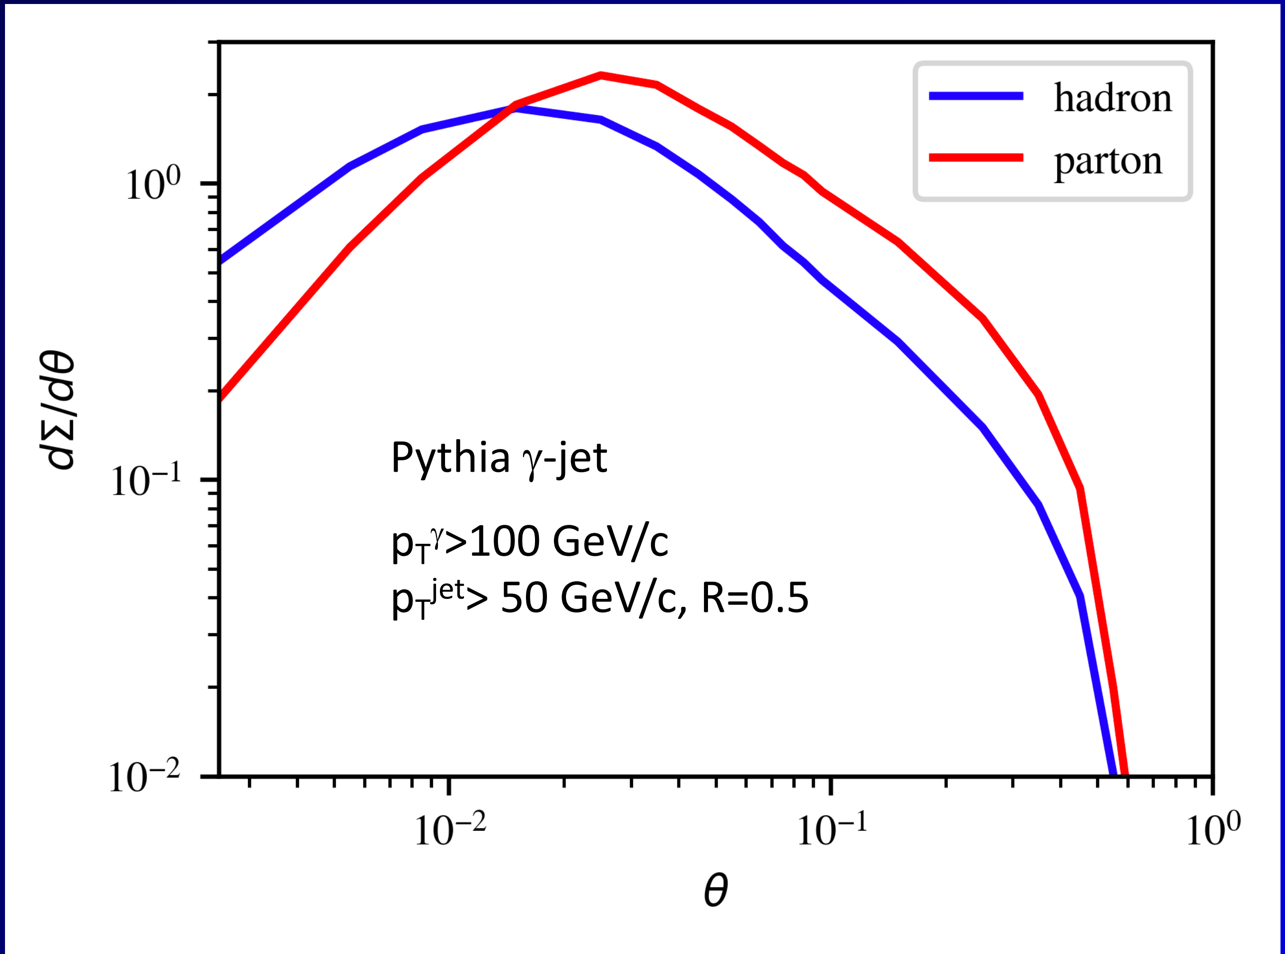
Uncorrelated emission at small angle

Effects of hadronization



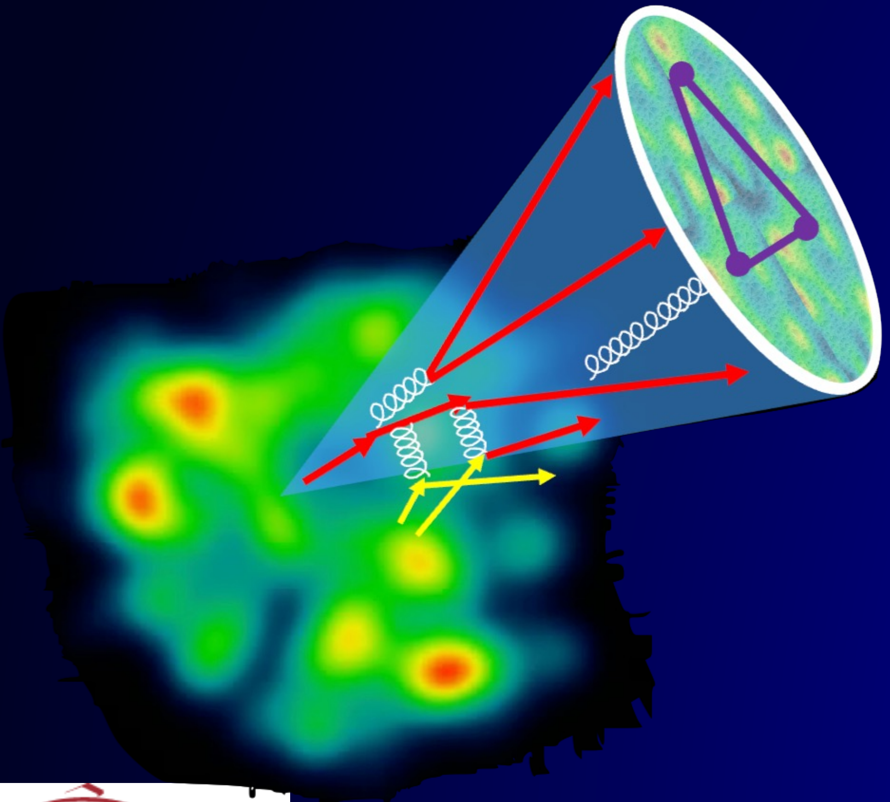


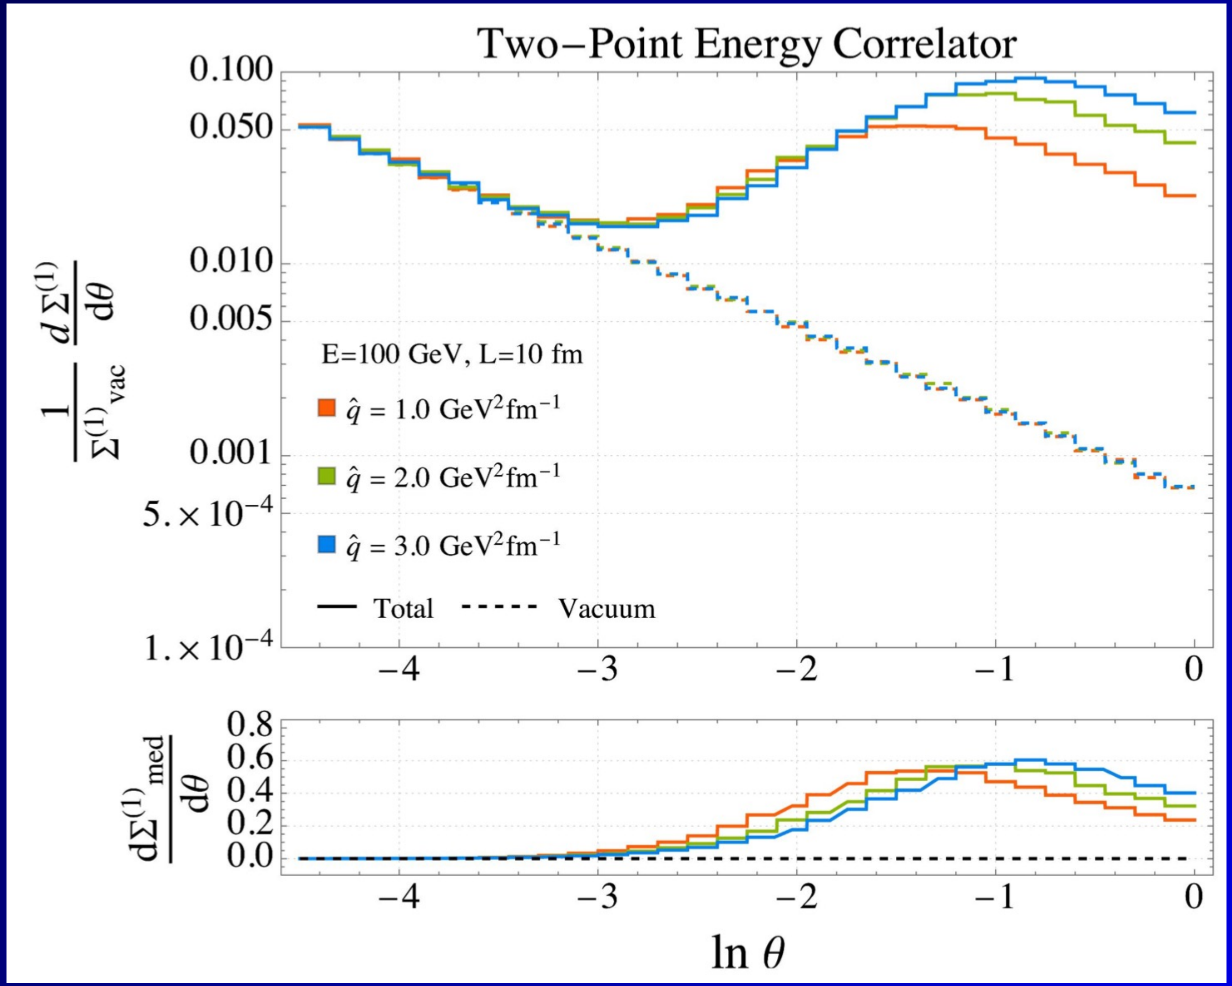
Random correlation at small angle



Power corrections at large angle

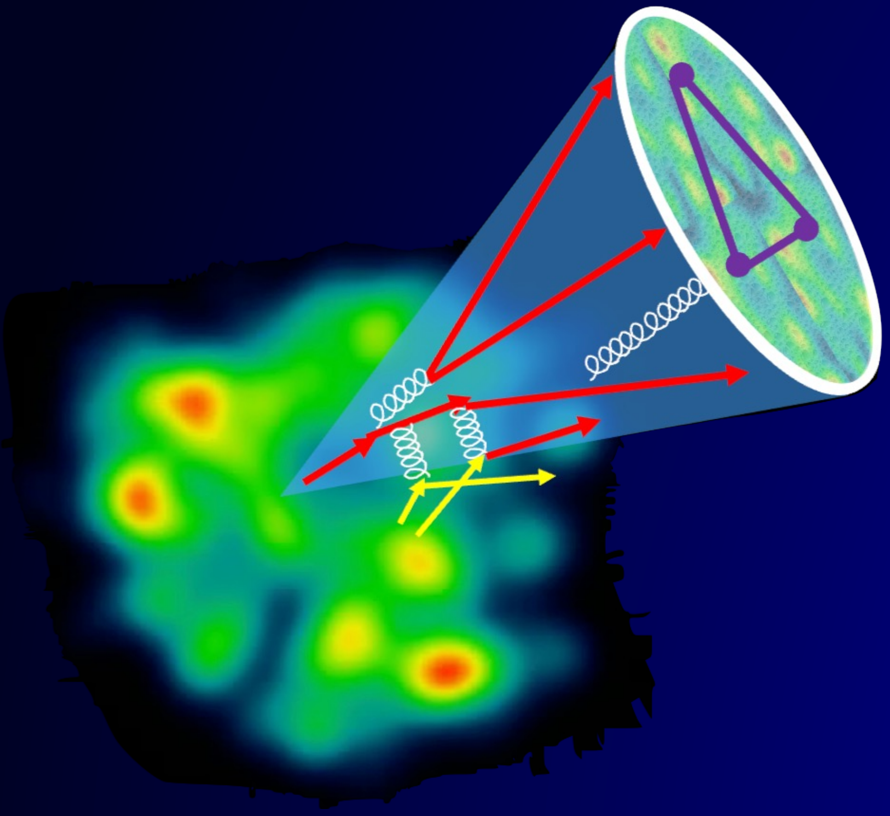
Resolving QGP scales with EEC





Andres, et al , 2209.11236

Resolving QGP scales with EEC



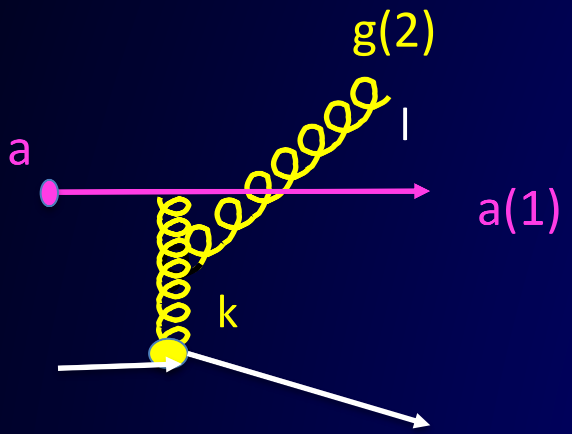
- Can EEC resolve the induced gluon emission in realistic heavy-ion collisions?
- Can EEC resolve recoil partons (medium response)?
- Can EEC resolve the angular scale of in-medium parton collisions

Gluon spectrum from single emission in GHT

Generalized HT induced emission in a QGP brick:

$$\tau_f = \frac{2z(1-z)E}{(\ell_\perp - \mathbf{k}_\perp)^2}$$

$$\frac{dN_g^{a(\mathrm{GHT})}}{dz d\ell_\perp^2} = \frac{C_A C_2(R)}{N_c^2 - 1} \frac{\alpha_s}{2\pi} P_{ag}^{(0)}(z) \int dy \rho_A(y) \int_0^{Q^2} d^2\mathbf{k}_\perp \frac{\alpha_s \phi_g(x_g, \mathbf{k}_\perp^2)}{k_\perp^2} \frac{2\mathbf{k}_\perp \cdot \ell}{\ell_\perp^2 (\ell_\perp - \mathbf{k}_\perp)^2} \left[1 - \cos\frac{y}{\tau_f}\right]$$



For small angle emission: $\ell_\perp \ll zE, |\mathbf{k}_\perp - \ell_\perp| \ll (\mathbf{1} - \mathbf{z})\mathbf{E}$

Change of variable

$$\theta_{12}^2 \approx 4\frac{(\ell_\perp - \mathbf{z}\mathbf{k}_\perp)^2}{z^2(1-z)^2E^2} \approx 4\frac{(\ell_\perp - \mathbf{k}_\perp)^2}{z^2(1-z)^2E^2}$$

$$\ell_\perp - \mathbf{k}_\perp \to \ell_\perp$$

$$\theta_{12} \approx \frac{2\ell_\perp}{z(1-z)E} \qquad \tau_f = \frac{2z(1-z)E}{\ell_\perp^2} = \frac{8}{z(1-z)E\theta_{12}^2} \qquad \int_0^{2\pi} d\phi \frac{\mathbf{k}_\perp \cdot \ell_\perp + \mathbf{k}_\perp^2}{(\ell + \mathbf{k}_\perp)^2} = 2\pi\Theta(k_\perp^2 - \ell_\perp^2)$$

Berkeley Lab

EEC in generalized high-twist

With a (GW) static potential model

$$\frac{\phi(0,\vec{k}_\perp)}{k_\perp^2} = C_2(T)\frac{4\alpha_s}{(k_\perp^2+\mu_D^2)^2}. \qquad \hat{q} = \int dk_\perp^2 \phi(0,k_\perp) \approx \rho \frac{C_2(R)C_2(T)}{N_c^2-1} 4\pi\alpha_s^2 \ln\frac{s^*}{4\mu_D^2}$$

$$\frac{d\Sigma_q^{\rm med}}{d\theta} = \frac{L^{5/2}}{\pi\sqrt{E}}\frac{\hat{q}}{\ln\frac{s^*}{4\mu_D^2}}\frac{8\alpha_s C_A}{\theta\sqrt{EL}}\int dz \frac{z(1-z)P_{qg}(z)}{z^2(1-z)^2\theta^2 EL+4\mu_D^2}\left[1-\frac{\sin ELz(1-z)\theta^2/8}{ELz(1-z)\theta^2/8}\right]$$

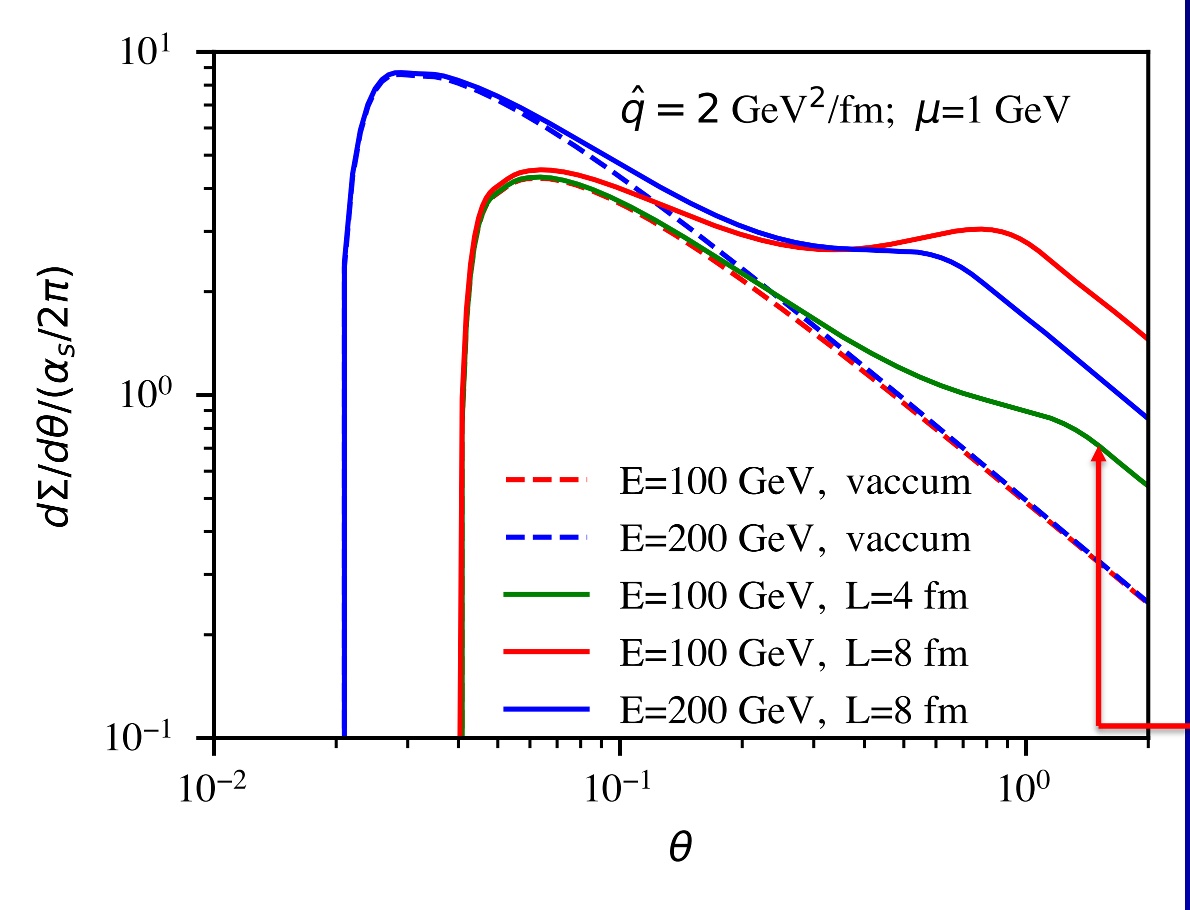
For large angles $z^2(1-z)^2\theta^2 EL \gg 4\mu_D^2$

Recover HT results:

$$\hat{q}_{HT} = \frac{\hat{q}}{\ln\frac{s^*}{4\mu_D^2}} \qquad \frac{d\Sigma_q^{\rm med}}{d\theta} = \frac{L^{5/2}\hat{q}_{HT}}{\pi\sqrt{E}}\frac{8\alpha_s C_A}{(\sqrt{EL}\theta)^3}\int dz\frac{P_{qg}(z)}{z(1-z)}\left[1-\frac{\sin ELz(1-z)\theta^2/8}{ELz(1-z)\theta^2/8}\right]$$

EEC from HT in single emission

HT induced emission in a QGP brick:



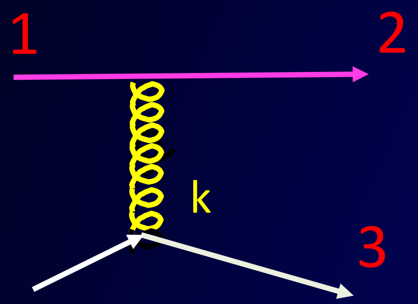
$$\frac{d\Sigma_q^{\text{med}}}{d\theta} \approx \frac{L^3 \hat{q} \alpha_s C_A \theta}{64\pi}, \theta < \sqrt{8\pi/EL}$$

$$\frac{d\Sigma_q^{\text{med}}}{d\theta} \approx \frac{L^2 \hat{q}}{2E} \frac{\alpha_s C_A}{\theta}, \theta > \sqrt{8\pi/EL}$$

Yang, He, Moult & XNW, 2310.01500

Contributions from medium response

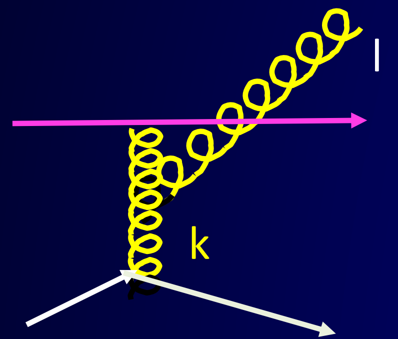
2→ 2 elastic collisions:

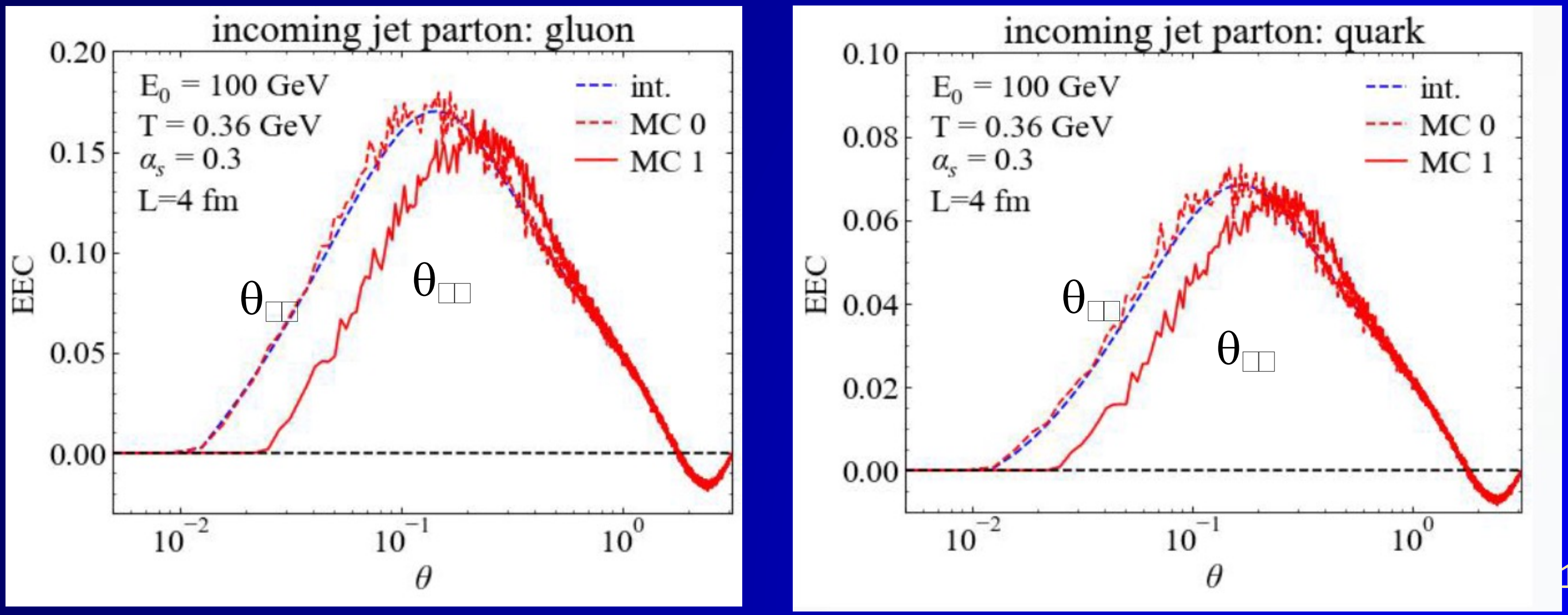


$$\frac{d\Sigma_a^{\rm med}}{d\theta} = \int dx d\vec{n}_{c,d}\delta(\vec{n}_c\cdot\vec{n}_d - \cos\theta) \sum_{b,(cd)} \int \prod_{i=b,c,d} d[p_i]$$
$$\times \frac{\gamma_b}{2E_a}\left[f_b(1\pm f_c)(1\pm f_d) - f_c(1\pm f_a)(1\pm f_b)\right]$$
$$\times \frac{E_c E_d}{E_a^2}(2\pi)^4\delta^4(p_a+p_b-p_c-p_d)\left|\mathcal{M}_{ab\to cd}\right|^2 ,$$

Both recoil and back-reaction ("negative partons")

2→ 3 inelastic collisions:





Linear Boltzmann Transport model

LBT: Linear Boltzmann Transport

$$p_1 \cdot \partial f_1 = -\int dp_2 dp_3 dp_4 (f_1 f_2 - f_3 f_4) |M_{12\to 34}|^2 (2\pi)^4 \delta^4 (\sum_i p_i) + \text{inelastic}$$

Induced radiation

$$\frac{dN_g}{dz d^2k_\perp dt} \approx \frac{2C_A \alpha_s}{\pi k_\perp^4} P(z) \hat{q} (\hat{p} \cdot u) \sin^2 \frac{k_\perp^2 (t - t_0)}{4z(1-z)E}$$

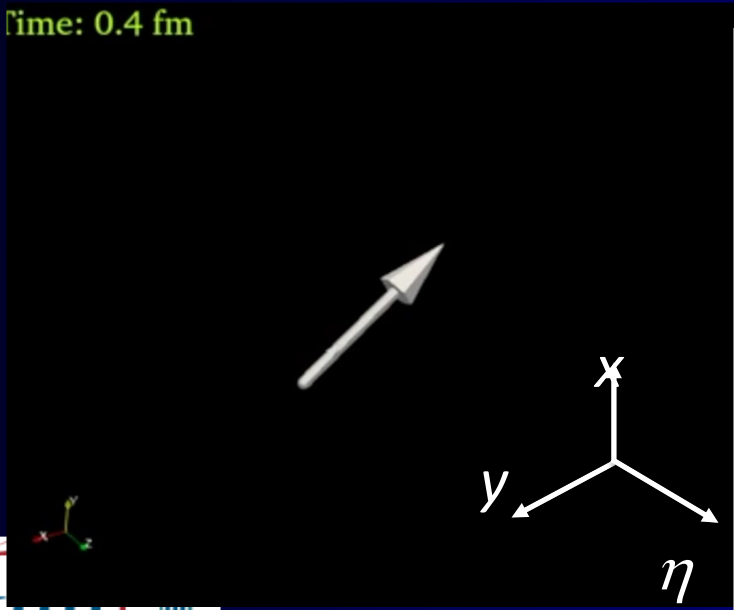
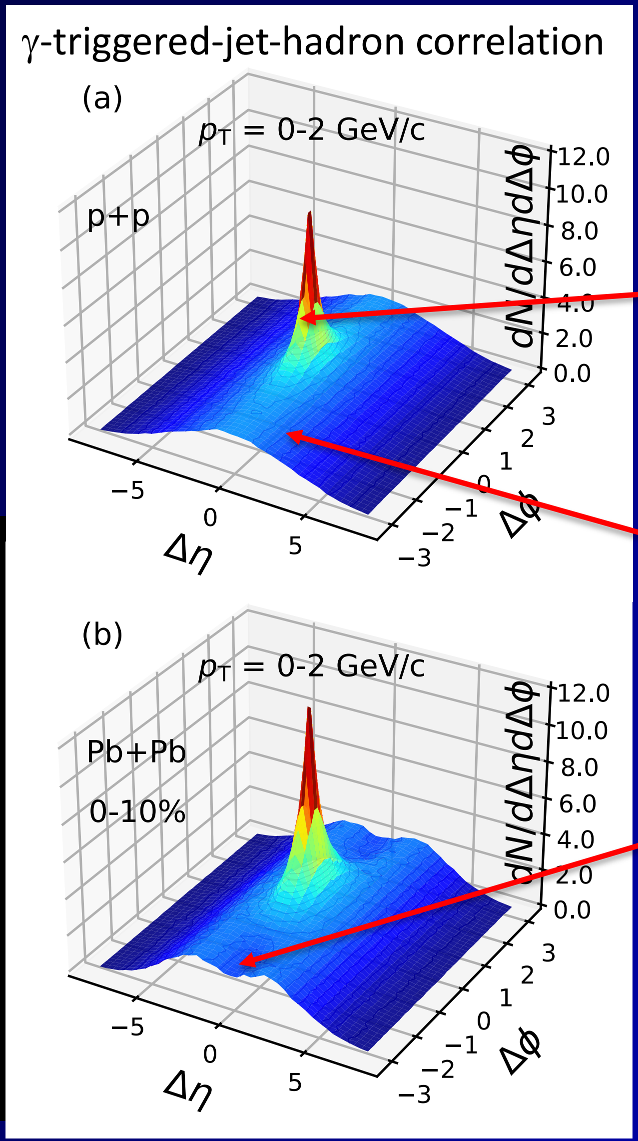
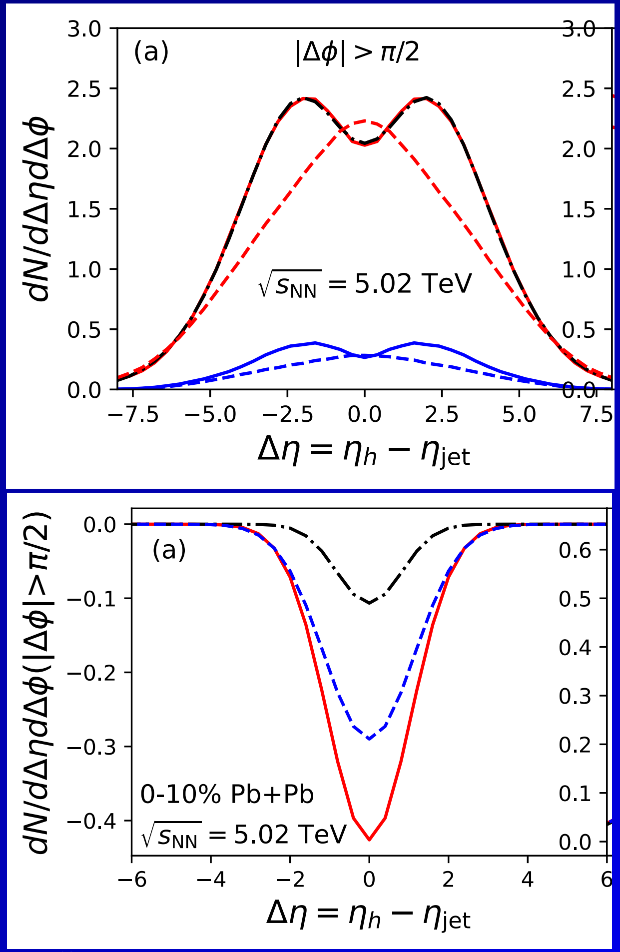
Search for jet-induced diffusion wake

Diffusion (DF) wake leads to depletion of soft hadron yield in the back of jet direction

Yang, Tan, Chen, Pang & XNW, *PRL,* 130 (2023) , 052301





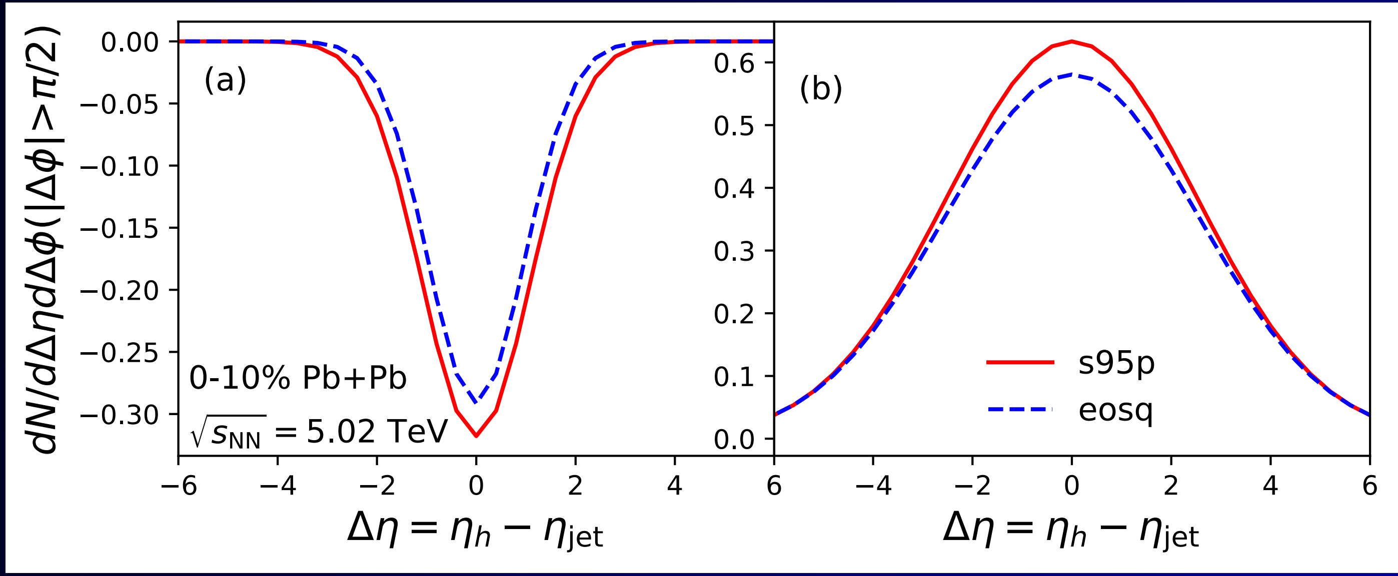


$$F(\Delta\eta) = \int_{\eta_{j1}}^{\eta_{j2}} d\eta_j F_3(\eta_j)(F_2(\Delta\eta, \eta_j) + F_1(\Delta\eta)),$$

Jet-distr MPI DF-wake

s

Sensitivity to EoS and shear viscosity

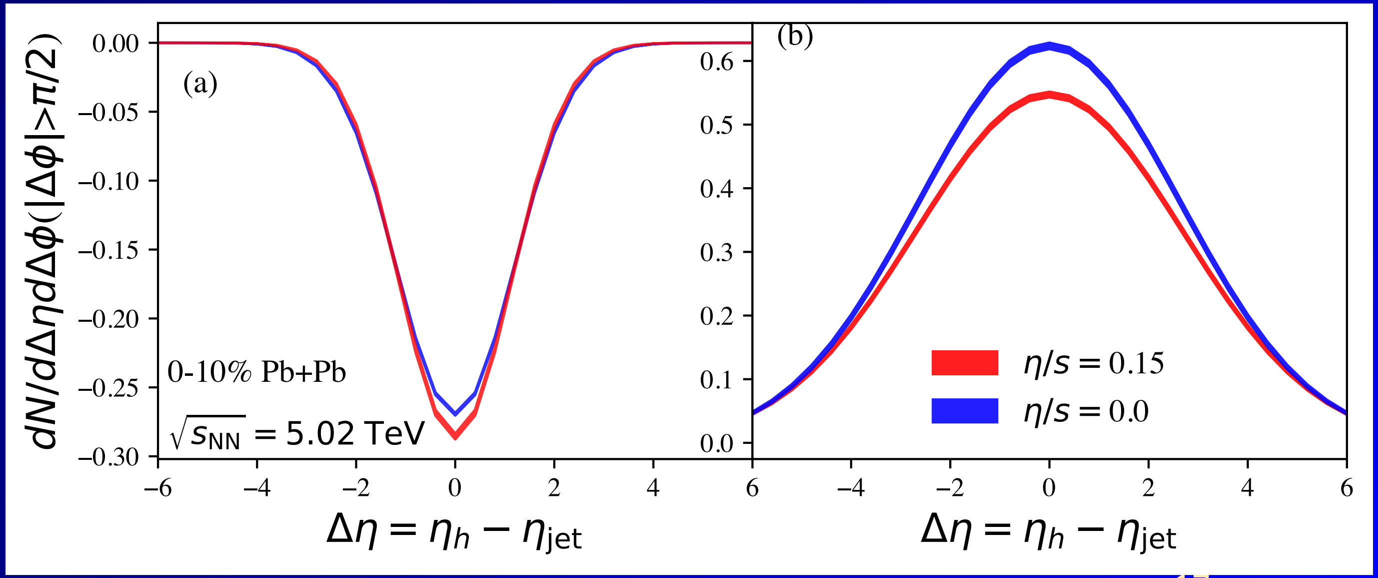


eosq: first order
s95p: rapid crossover from LQCD

Larger effective c_s in eosq → :
larger Mach cone angle → shallower DF valley
Stronger radial flow → smaller soft MPI

Competition of:

- η/s increase transverse flow → suppression of soft MPI and DF valley
- Negative shear correction of longitudinal pressure → impede longitudinal expansion → increase MPI and DF valley



Deep learning assisted jet tomography

PCN (point cloud network)

Actual distribution

γ-soft hadron correlation

EEC of single parton in a QGP brick

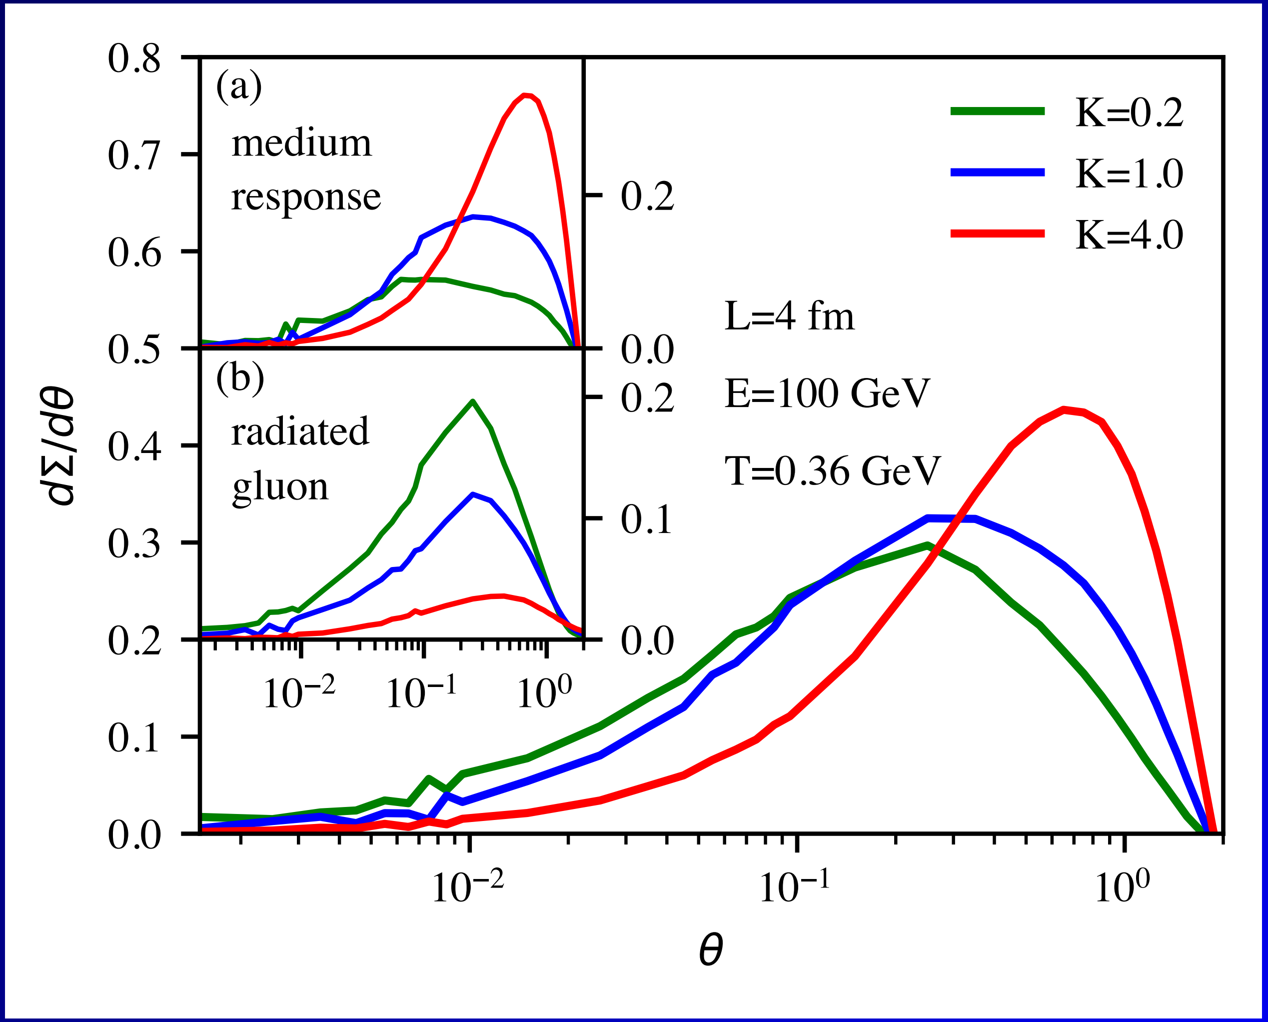
Single parton with multiple scattering in a brick in LBT

Debye mass:

$$\mu_D^2 = \frac{3}{2} K g^2 T^2$$

We vary only *K* in the sampling the transverse momentum transfer of 2→2 and kinematic limit of gluon bremsstrahlung. We however keep qhat and 2→2 rate unchanged.

Medium response
(recoil + "negative" partons)
Is (more) important



Yang, He, Moult & XNW, 2310.01500

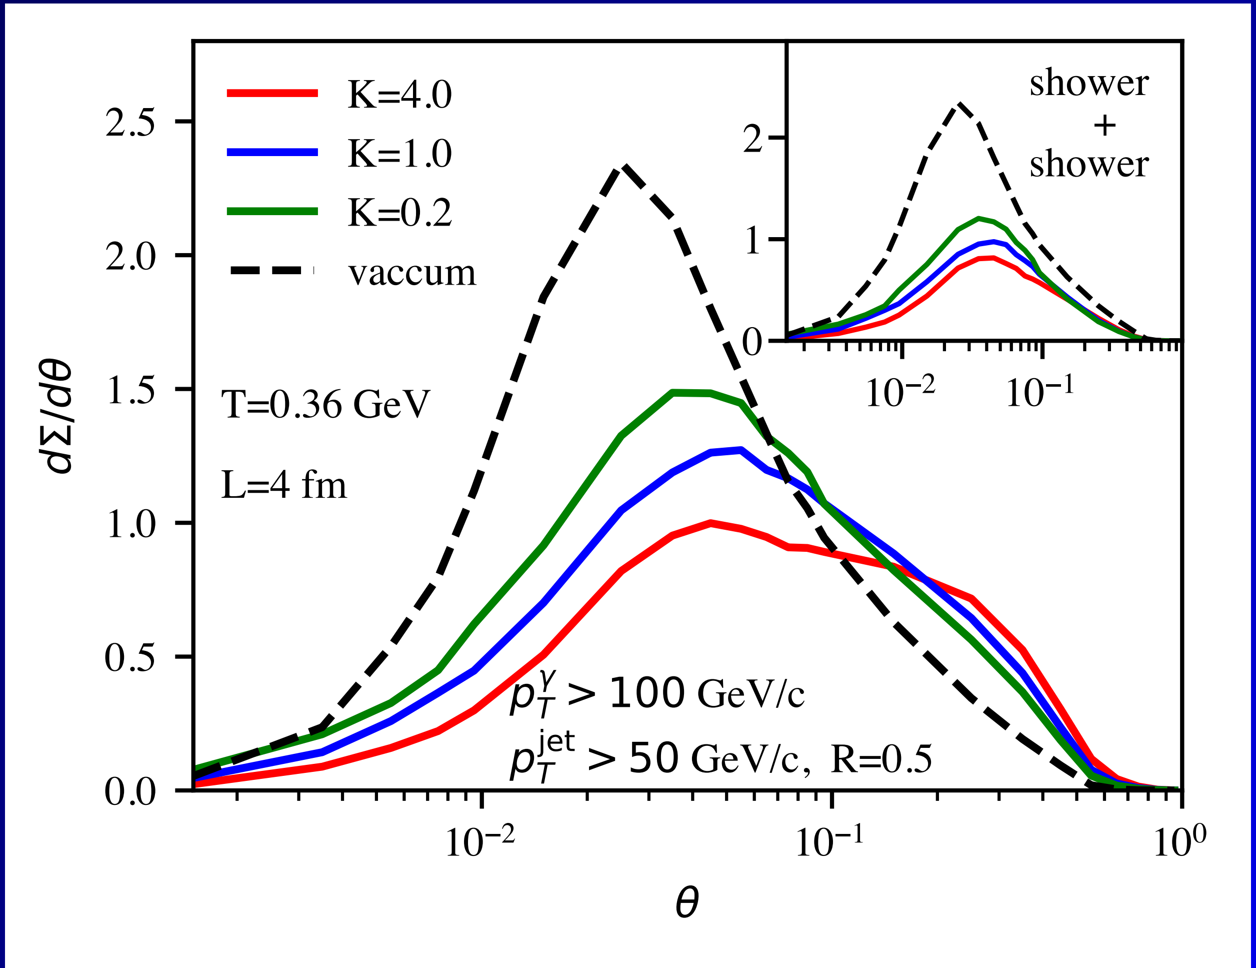
EEC of a jet shower in a QGP brick

A jet shower in a brick in LBT

Initial γ-jet configurations generated from Pythia8

Energy loss and momentum broadening lead to suppression at small angles

Radiated gluon and medium response dominate at large angles



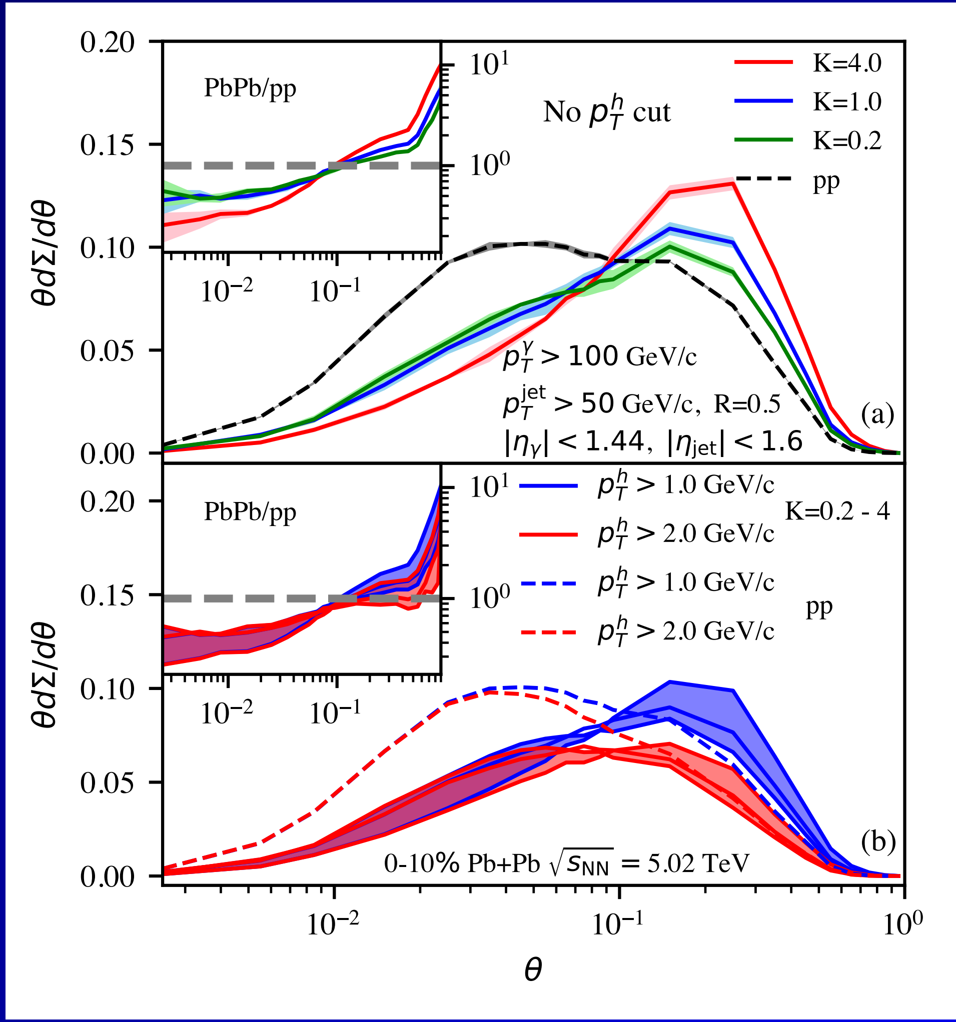
Yang, He, Moult & XNW, 2310.01500

EEC of γ-jets in Pb+Pb Collisions

CoLBT simulations:

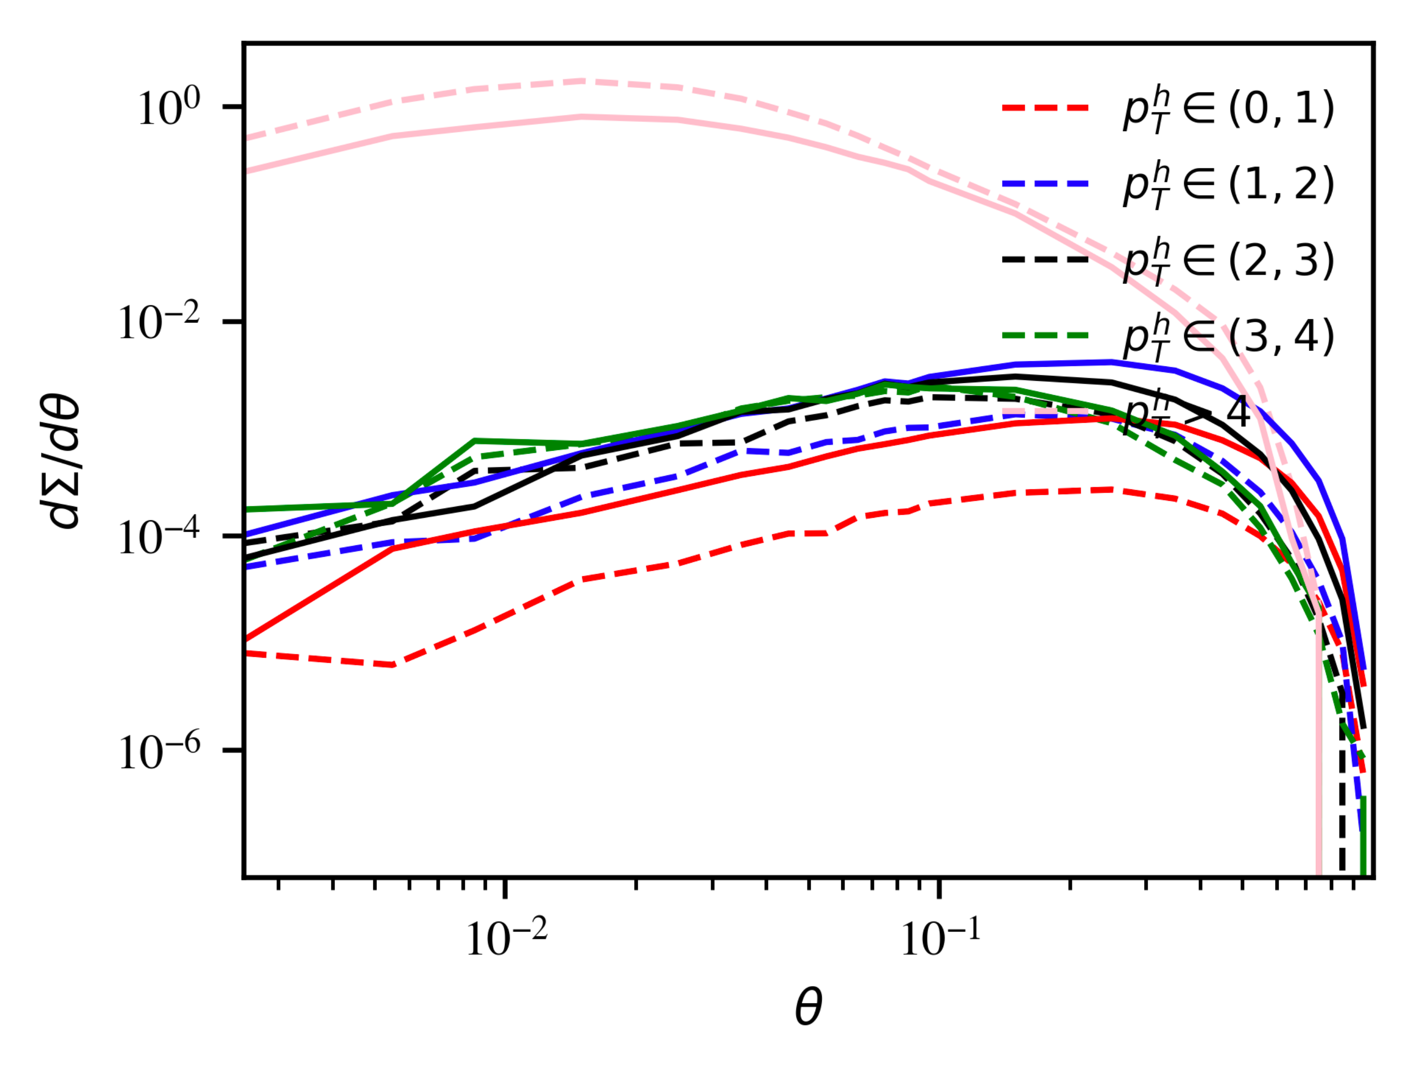
Enhancement at large angles by soft hadrons from radiated gluons and medium response, sensitive to pT cuts

EEC by energetic hadrons from leading shower partons at small angles are suppressed, not affected by pT cuts

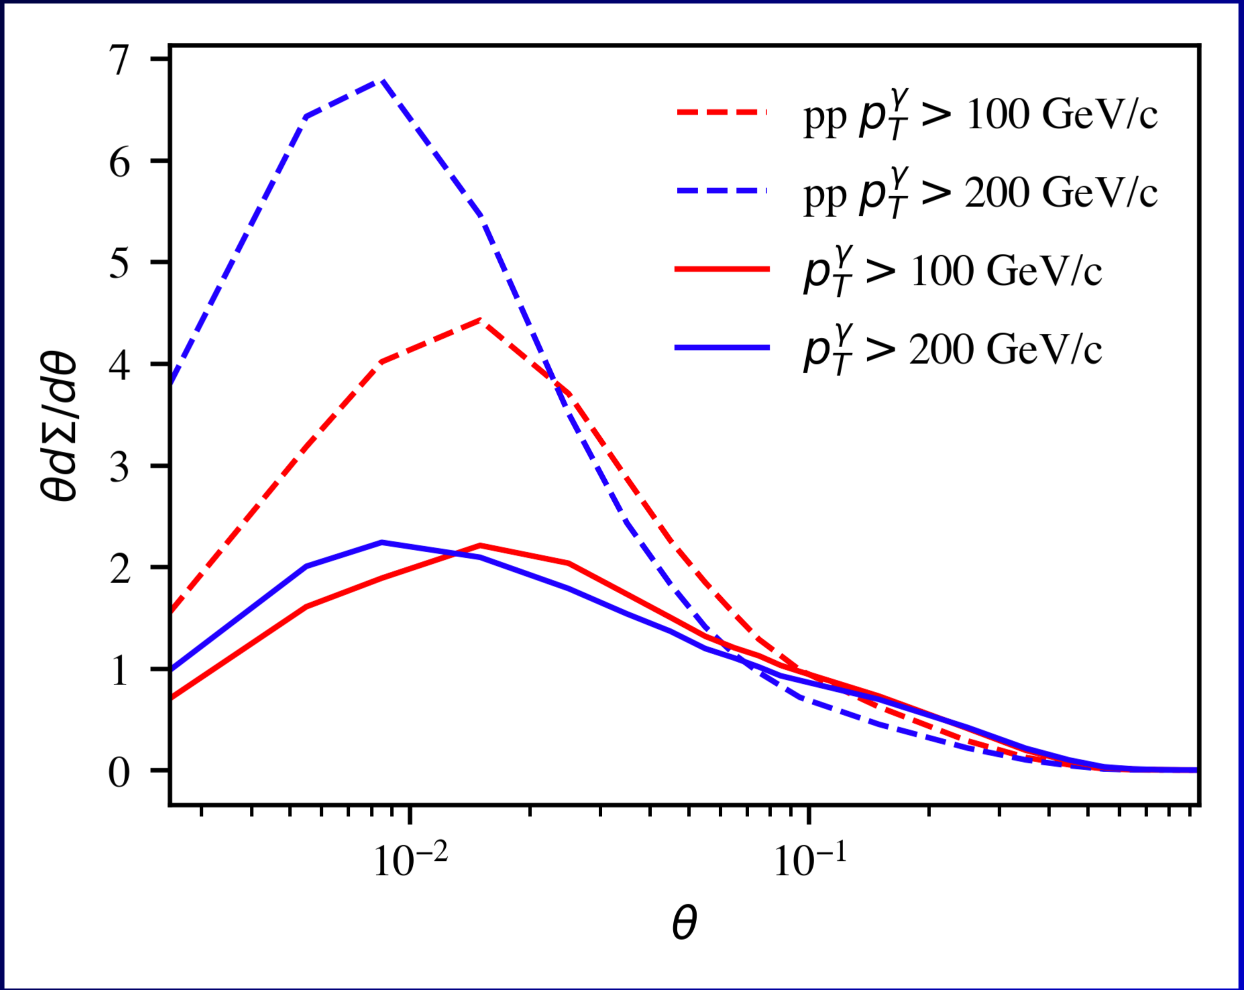


Yang, He, Moult & XNW, 2310.01500

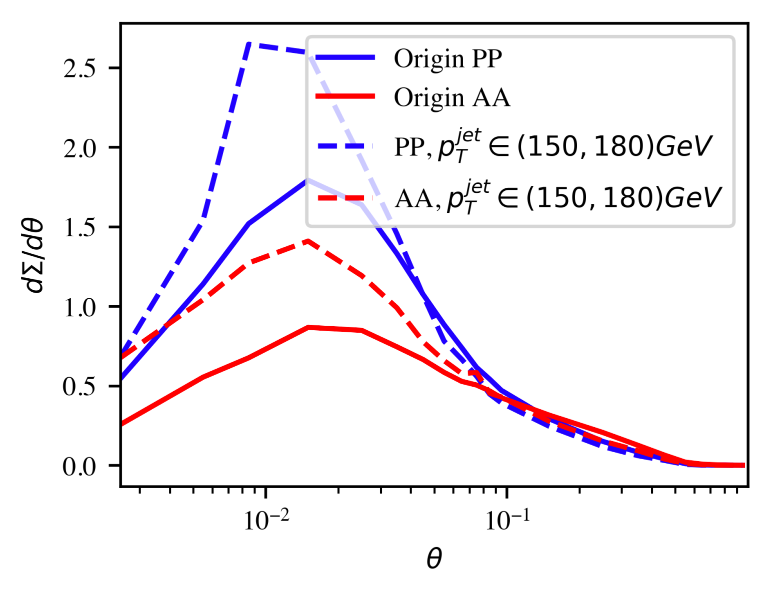
pT dependence of EEC

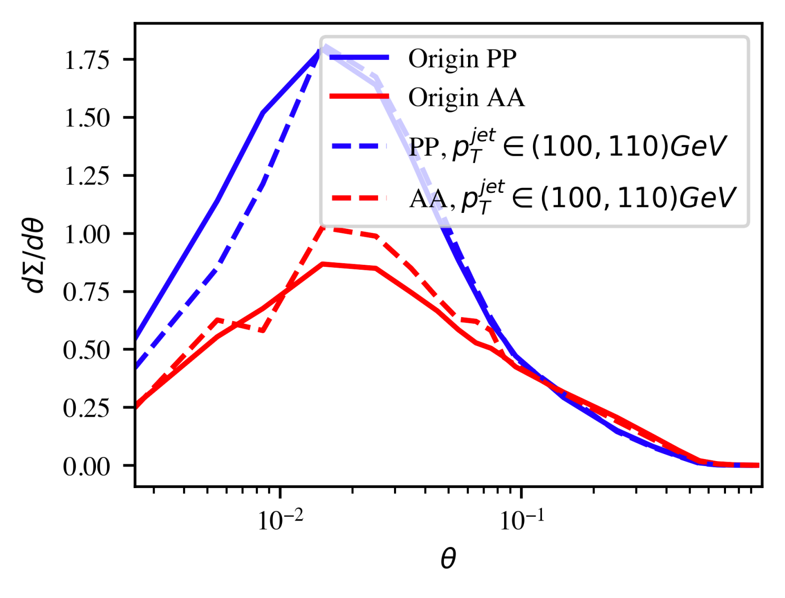


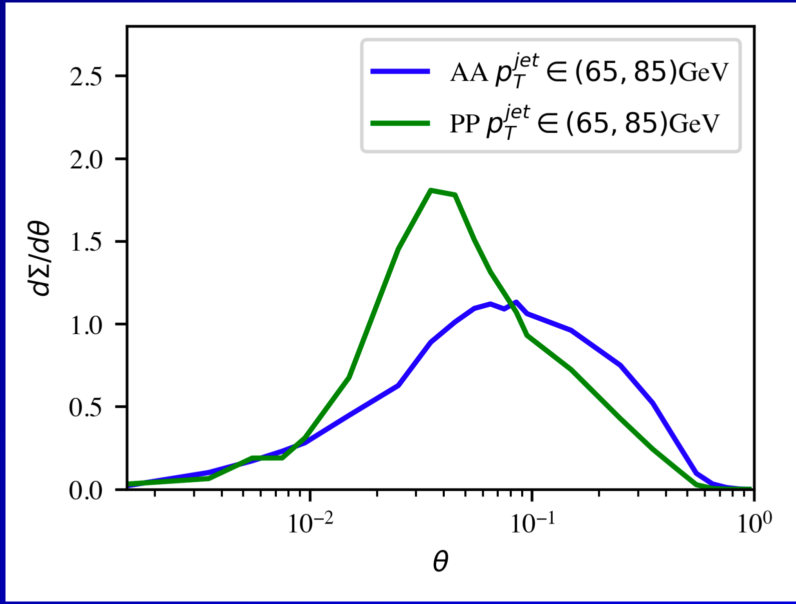
γ energy dependence



Jet energy dependence







Summary

- First complete and realistic calculation of jet EEC in heavy-ion collisions
- Medium-response dominates enhancement of EEC at large angles
- Energy loss of leading jet shower partons leads to suppression of EEC at small angles
- Medium modification of EEC is sensitive to the angular scale of in-medium parton collisions
